

NCast Announces First Capture Appliance to Integrate Scheduling with the Ubiquitous Google Calendar.

Sunnyvale, Calif. — May 18, 2007 —

Today, NCast Corporation – a leading supplier of Multimedia Capture Appliances and Streaming Servers – announced that it has developed a scheduler system around Google calendar. By leveraging this platform, Telepresenter™ administrators can start and stop the capture of various events on an infinite number of Telepresenter™ around the globe from one central location. This calendaring mechanism allows the administrator to upload a custom template of picture-in-picture and text layouts, setup event-specific operating parameters, if desired, start and stop the capture, and then move the resultant archive file to an On-demand server such as the NCast N-Way Server. At no time does the ‘presenter’ have to push a button, click a mouse, or even think about the mechanics of the capture, other than the content the presenter created and would present anyway.

“This tool really makes it simple to capture and stream an event, such as a lecture, earnings call, or a presentation.” says Dr. Hank Magnuski, Chairman and CEO of NCast. It leverages a well understood industry tool to completely automate what has traditionally been a fairly complex logistical task.”

NCast reports that the Google calendaring system is implemented in a freely-downloadable Python script, but will be fully incorporated in a future release of the Telepresenter™ M3. Visit NCast’s website to learn more.

About NCast

NCast Corporation provides industry-leading solutions for the capture, distribution, and archiving of high-resolution, mixed-media content such as rich-media presentations or annotated high-resolution graphics. NCast’s 3rd-generation Telepresenter M3™ simplifies the mixing of audio, high definition (HD) video, and any high resolution RGB/DVI source into one rich-media file for webcasting or playback. The Telepresenter M3™ is used in applications such as presentation capture, live and on-demand training, telemedicine, distance learning, and podcasting. Our customer profile includes large and small corporations, government and military commands, school systems, universities, and medical institutions. NCast enables these organizations to record and stream content simply and cost effectively.
